

**BIOGRAPHICAL SKETCH**

Provide the following information for the Senior/key personnel and other significant contributors.  
Follow this format for each person. **DO NOT EXCEED FIVE PAGES.**

NAME: James R. Carey

eRA COMMONS USER NAME (credential, e.g., agency login): FZCAREY

POSITION TITLE: Professor

EDUCATION/TRAINING (*Begin with baccalaureate or other initial professional education, such as nursing, include postdoctoral training and residency training if applicable. Add/delete rows as necessary.*)

INSTITUTION AND LOCATION	DEGREE	Completion	FIELD OF STUDY
Iowa State University	B.S.	March, 1973	Animal Ecology
Iowa State University	M.S.	June, 1975	Entomology
University of California, Berkeley	PhD	June 1980	Entomology
Harvard University	--	1978-79	Visiting PhD student (population geneticists Richard Lewontin & Richard Levin laboratories)

**A. Personal Statement**

I am an entomologist with complementary training in insect biology (both field and laboratory) and demography, the former of which I received when matriculating for my PhD and the latter of which I received by engaging with demographers at Berkeley (e.g., auditing Dr. Kenneth Wachter's course) and becoming a member/senior scholar of the Center for the Economics and Demography of Aging. I am a long-standing member of both the Population Association of America (PAA) and the Gerontological Society of America (GSA). I directed a \$10 million, multi-university P01 for nearly 10 years (2003-2013), the theme of which was "aging in the wild". I was the discoverer of what has become to be known as "Carey's Equality" while directing this P01 and my individual project within it.

My research interests involve the biology and demography (biodemography) of aging and life span, topics on which I have published 3 books (a fourth in production), senior-edited 5 proceedings, and published over 250 refereed papers. I am co-author (with Deborah Roach) of the invited chapter for the 2014 edition of the Annual Review of Ecology, Evolution and Systematics titled "Population biology of aging" and the lead author of the 11-chapter book "Biodemography: Introduction to concepts and methods" by J. R. Carey and D. A. Roach (2020, Princeton University Press) that be the first book published in this blossoming new field.

My primary research focus from the early 1990s through the middle of last decade was on questions concerning slowing of mortality, health demography, electronic behavioral monitoring system, sex mortality differentials, longevity effects of selected compounds, lifespan evolution, and effects on longevity of ovarian transplantation. However, in the last decade my focus has shifted to studies of aging in the wild. Using original modeling approaches, my colleagues and I innovated the use of demographic and behavioral data gathered in the laboratory from wild, live-captured insects in the field to examine aging dynamics in wild populations (i.e. captive cohort methodology). Although the main empirical component has involved field studies of the medfly in Greece and butterflies in Uganda, in the last year my laboratory has funded studies on aging in wild mosquitoes (Volos, Greece) and wild *Drosophila* (Davis, CA). In my career I have published papers related to the biodemography of aging in field and laboratory studies for tephritid fruit flies, the honeybee, the yellow fever mosquito, butterflies, spider mites, *C. elegans*, laboratory mice, mangabeys (Uganda), and humans.

## B. Positions and Honors

List in chronological order previous positions, concluding with the present position. List any honors. Include present membership on any Federal Government public advisory committee.

1992-present	Professor	University of California, Davis
1996-present	Senior Scholar	Center for Economics and Demography of Aging (CEDA), UC Berkeley
1997-99	Vice Chairman	UC Davis, Department of Entomology
1987-92	Associate Professor	University of California, Davis
1980-87	Assistant Professor	University of California, Davis
1973-75	Graduate Research Assistant	Iowa State University, Ames
1975-80	Graduate Research Assistant	University of California, Berkeley
2006	Smithgroup Distinguished Lecturer	Beckman Center, University of Illinois
2003-13	Program Director (NIH/NIA P01)	Biodemographic determinants of lifespan
2008	Chair, University Com. Research Policy	UC Systemwide (appointed 2008-09)
2008	UC Academic Council	UC Systemwide (appointed 2008-09)
2000	Fellow	AAAS
2003	Fellow	Gerontological Society of America
2010	Fellow	California Academy of Science
2011	Fellow	Entomological Society of America
2013	Distinguished Teaching Award	UC Davis Academic Senate
2015; 2016	Distinguished Teaching Award	Entomol. Soc. Amer (Branch & National)
2017	Semi Finalist	Cherry Great Teacher Competition (Baylor Univ)
2014	Distinguished Professor	UC Davis above scale rank
2016	Lead plenary speaker	Int. Congress of Entomology (Orlando)
2017	Plenary speaker	Evolutionary Demography Society (Miami)

## C. Contribution to Science

### 1. Biodemography.

Having finished a demography-based PhD dissertation in insect ecology, taught a graduate course in mathematical insect demography, networked with demographers at the UC Berkeley Department of Demography, joined the Population Society of America, and published a book on applied biological demography, by the early 1990s I had undergone a professional transformation from specializing in insect ecology to biological demography, now referred to as biodemography. I have been involved in and helped shape this field since it began to emerge in the mid-1990s as a sub-discipline of mainstream (human) demography. I continue to be active in shaping the field including membership on the governing board of the newly-founded Evolutionary Demography Society and frequent invitations to present talks at international meetings. For example, I have been invited to present the lead-off plenary talk (Title: *Insect demography: A 21<sup>st</sup> century tour*) at the 2016 International Entomological Society meetings in Orlando.

## 2. Aging in wild.

Because of the technical and logistical limitations of estimating insect age and survival in the wild, my colleagues and I innovated a new concept for estimating age/frailty structure in wild insect populations. Referred to as the captive cohort method, the underlying concept is that a population's age structure and its death distribution are inextricably and uniquely interconnected. Therefore with certain simplifying assumptions the former can be estimated from the latter using demographic models and reference life tables. This new concept is emerging as one of the original new approaches to study aging in wild insect populations.

## 3. Mortality dynamics/slowing.

In the early 1990s research that I the team that conceived, designed, implemented and published the answer to the question that has a bearing on whether there are specific limits to lifespans across species: “*What is the trajectory of mortality at the most extreme ages?*” Whereas the prevailing wisdom at the time was that mortality approached unity at the most extreme ages, my colleagues and I demonstrated using the largest life table for any non-human species (1.2 million fruit flies) that the trajectory slowed. The observation of “slowing” a subset of a broader research sub-theme involved with mortality dynamics involving interpretation and comparison of patterns of age-specific mortality such dietary effects, gender and inter- and intra-species differences and cost of reproduction.

## 4. Lifespan.

Lifespan is a fascinating topic that, remarkably had received limited attention in the population biology and demography literature, and on which there was remarkably little actual data that it been brought together in one place. Consequently my former postdoc and I brought together all of the data in the literature that we could find on lifespan vertebrates and published the first book resource book on lifespans in mammals, birds, reptiles, amphibians, and fish.

## D. Research Support

### Current research funding

Supported with arrangement UCD CAES Dean's office for Summer Session teaching

CEDA/NIA grant 5/31/18-6/1/19 "Longevity and lifespan 1750-2018: Historical analysis of large-scale family tree databases for England"; \$29,076

### Pending

CEDA/NIA grant "Recording lifetime activity, sleep patterns and reproduction to assess healthspan and predict time-to-death in the Mediterranean fruit fly" \$22,830

### Completed

NIH 1R56AG043995 – 01 (PI) 12/01/12- 6/30-14

"Pathways to Healthy Old Age in Fruit Flies: Towards a Conceptual Synthesis"

To study various metrics of health and the behavior and movement of individual flies.

NIH P01 AG08761-10 (PI) 2003-13

"Aging in the wild"; Project director of 5-project P01 focusing on aging in wild including nematodes, fruit flies, indigenous peoples, evolutionary demography and mathematical demography
